¹ Raw data mainly contain Norwegian names, English names are added to final data sets

² Material types are assigned based on what is considered to be the dominant type (gl = glass; me = metal; pa = paper; pl = plastic; ru = rubber; wo = wood; ot = other)

³ Items are classified into likely origin types on two different levels, only 'wide' is used in analyses (i.e. categories describe a wide range of items)

⁴ These variables were present in the original data, but were removed for privacy reasons

⁵ We were unable to figure out what was meant by this
